

# Application of Novel Genotyping Microarray Technologies in Cancer Research

Ricardo Ramos<sup>\*,1</sup>, Juan Moreno-Rubio<sup>†,1</sup>, Enrique Casado<sup>†</sup>, Guillermo Reglero<sup>‡,§</sup> and Ana Ramírez de Molina<sup>‡</sup>

<sup>\*</sup>Genomic Unit, Scientific Park of Madrid, Madrid, Spain

<sup>†</sup>Medical Oncology, Infanta Sofia Hospital, Madrid, Spain

<sup>‡</sup>Molecular Oncology and Nutritional Genomics of Cancer, IMDEA Food Institute CEI UAM + CSIC, Madrid, Spain

<sup>§</sup>Instituto de Investigación en Ciencias de la Alimentación (CIAL), CEI UAM + CSIC, Madrid, Spain

## Chapter Outline

<b>1. Introduction</b>	<b>48</b>	3.2. Analysis of DNA Variation Independent from Single Nucleotide Polymorphisms	62
<b>2. Cancer Genetics: From Biology to Clinical Practice</b>	<b>48</b>	3.3. Variants Found in Small Numbers	63
2.1. The Discovery of Cancer Genetics	48	3.4. Gene Expression Studies	65
2.2. The Introduction of Cancer Genetics on Cancer Therapy	49	<b>4. Next-Generation Genomic Techniques</b>	<b>65</b>
2.3. Tumor Genome Analysis Applied to Improve Cancer Therapy	51	<b>5. Applications of Novel SNP Technologies in Cancer Research</b>	<b>66</b>
<b>3. Genotyping Technologies</b>	<b>57</b>	<b>6. Conclusions and Future Directions</b>	<b>68</b>
3.1. The Study of Defined Variants at the Level of DNA	57	<b>References</b>	<b>69</b>

1. Equal contribution.
